# Chromatography

Watch how colors travel.

Chroma = Color & Graph = Some sort of illustration

We are illustrating how different colors travel, sperate, move, disperse on different papers?

What did you see?

Which color traveled farthest? Why?

Why do you think the colors travel?

What difference did the different papers make?

**What would happen if we used different liquids? Which ones?**

Hypothesis:

Experiment:

Observation:

**What if it was cloth, plastic?**

Hypothesis:

Experiment:

Observation:

Can any liquid also travel like the colors did?  
Where do you see this happening around you?
